## About HTML5 Slideshow Maker

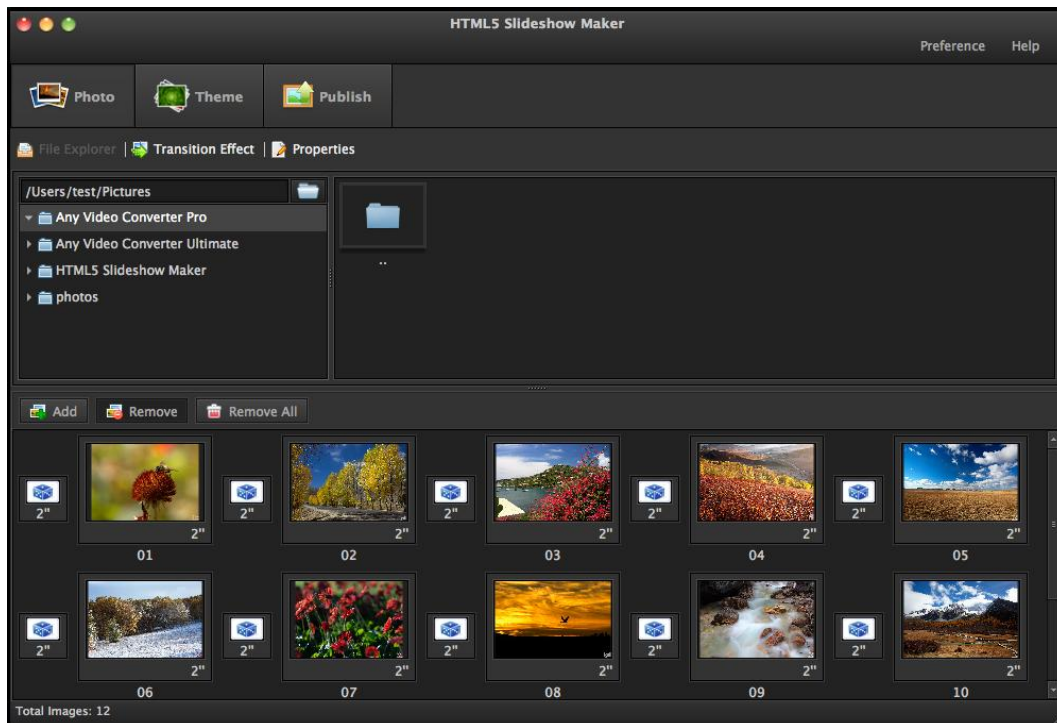

HTML5 Slideshow Maker is an easy-to-use and powerful slideshow creator. It can make a stunning slideshow within a few clicks. With HTML5 Slideshow Maker, you can easily turn your images into a photo gallery and share it with your friends via sending email, uploading to your own website, etc.

## System Requirement

- Mac computer with Intel processor
- Mac OS X v10.6 or higher
- 512 MB of RAM or above

## Main Window

The main window of HTML5 Slideshow Maker is shown as below:

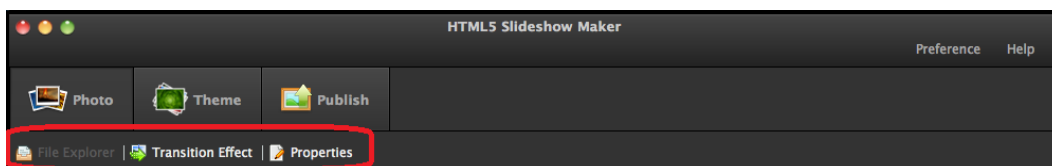

## 2 Using HTML5 Slideshow Maker

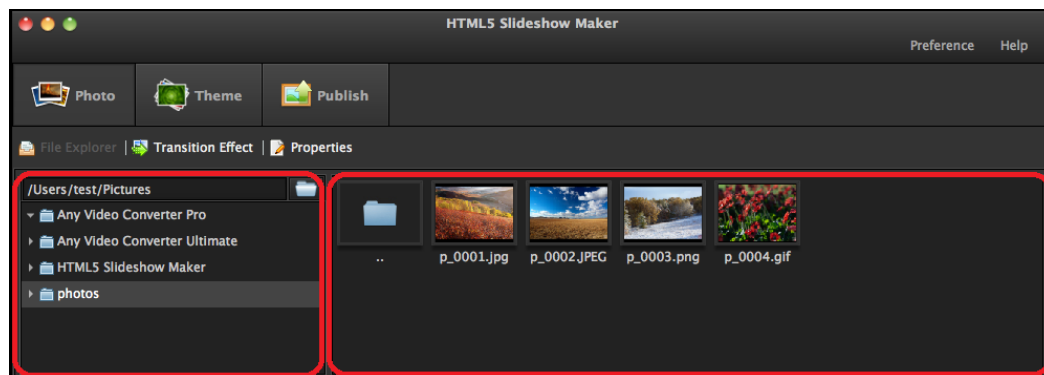

There are only three simple steps to making a photo slideshow.

### Step 1: Add Photos, Transition Effects and Propertise

There are three tabs under the **Photo** tab. They are **File Explore**, **Transition Effect**, and **Properties**.

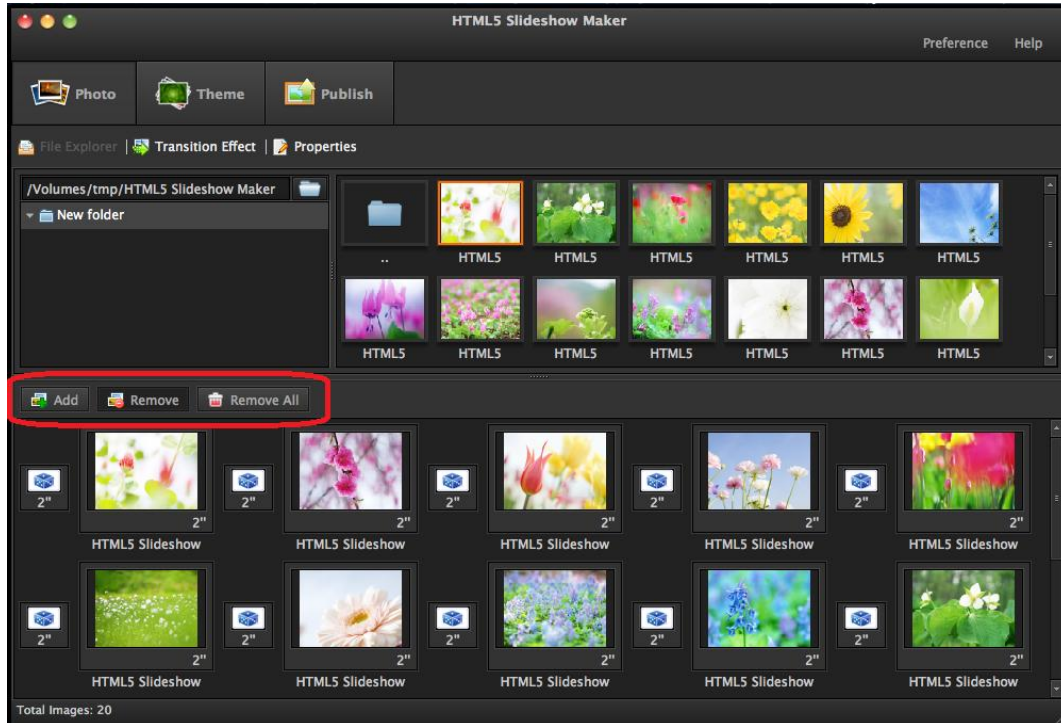

**File Explore** tab can help you add photos to HTML5 Slideshow Maker more easier. The right panel under the **File Explore** tab shows the subdirectories of the directory you opened on the left panel.

After finding the folder which saves your photos on the left panel, the right panel will show all the photos saved in that folder. Clicking the "**Add Photo**" button will activate a browse window, please select the photos you want to make a slideshow with and click "**Open**" to load your photos to HTML5 Slideshow Maker. If you want to select more than one photo at the same time, please press "**Shift**" or "**Command**" while selecting the photos.

You can find the photos you added on the lower panel of the HTML5 Slideshow Maker. The names of the photos will be displayed as well.

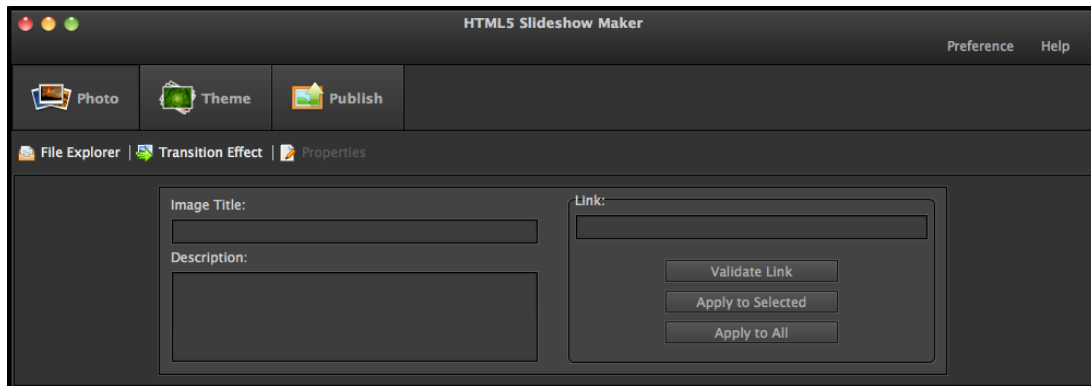

If you added a photo by mistake, please select the photo and click “**Remove Photo**” button to delete the selected photo. If you want to delete more than one photo at the same time, please press “**Shift**” or “**Command**” while selecting the photos. If you want to delete all the photos, please click “**Remove All Photo**” button.

After adding photos to HTML5 Slideshow Maker, you can add 60+ transition effects under the **Transition Effect** tab.

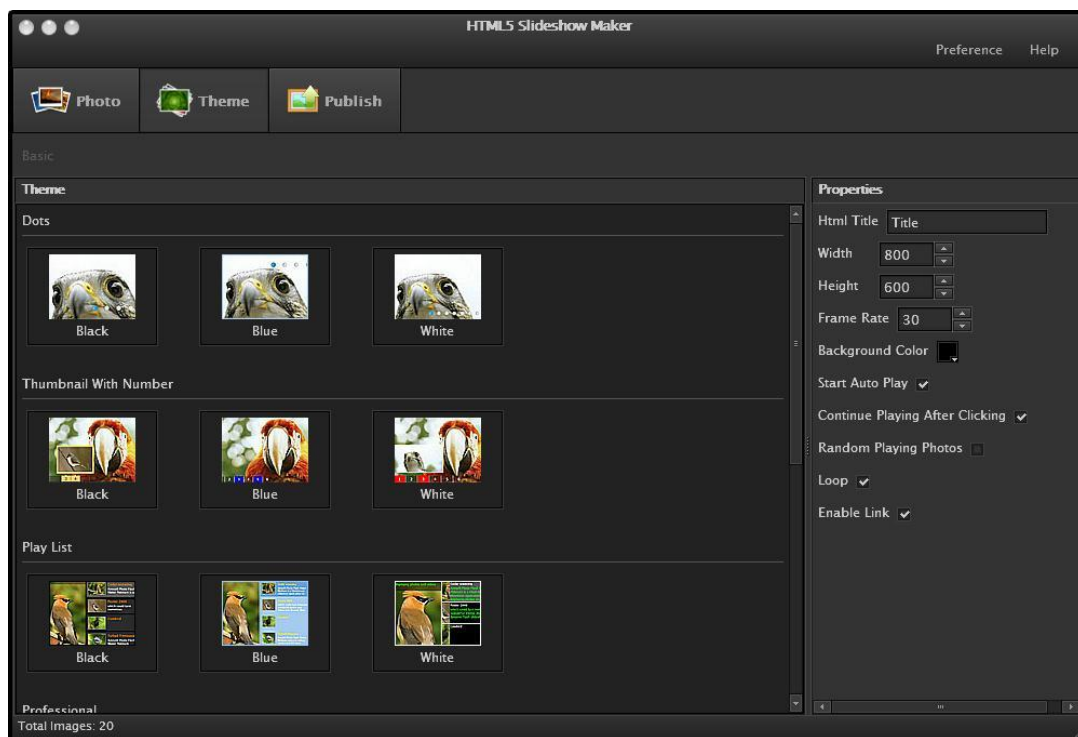

After setting the transition effects, you can add image titles, descriptions & hyperlinks under the **Properties** tab.

## Step 2: Choose Theme

With HTML5 Slideshow Maker, you can use lots of preset HTML5 theme templates. By clicking the **“Theme”** tab, you’ll see the HTML5 templates.

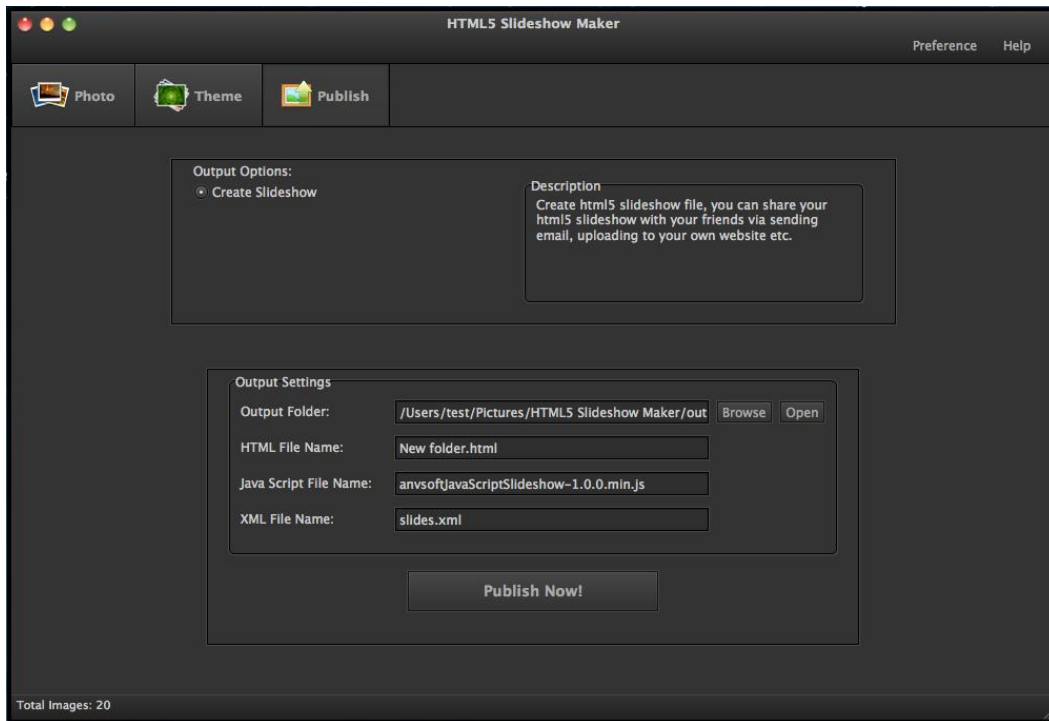

Clicking the thumbnail of a theme means you are choosing this theme.

## Step 3: Publish Slideshow

By clicking the **“Publish”** tab, you can come to the last step.

In the “**Output Settings**” panel, you need browse the output folder location for your slideshow, you can also save the output files in the default location.

HTML5 Slideshow Maker will start to produce the output files after you click “**Publish Now**” button.

After publishing the photo slideshow, a pop-up window will show up to inform you that you have successfully published the photo slideshow. Meanwhile, you can view your photo slideshow by clicking “**View HTML5 Slideshow**” and get the output files by clicking “**Open Output Folder**”.

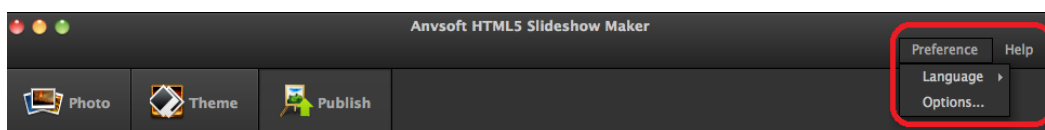

## 3

## Personalizing HTML5 Slideshow Maker

HTML5 Slideshow Maker offers you flexible settings for customizing the program. By taking settings, you can set language preference, customize your own theme, and change photo and thumbnail settings.

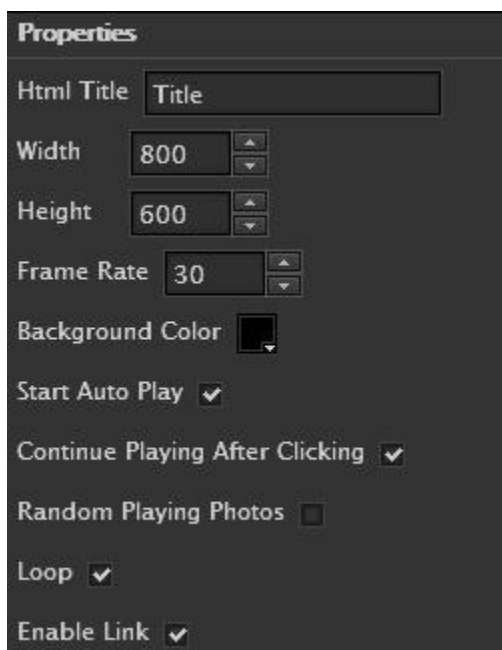

### Language Preference

You can set the language preference by clicking the “**Preference**” button at the top right corner of the interface and choose “**Language**”.

### Theme

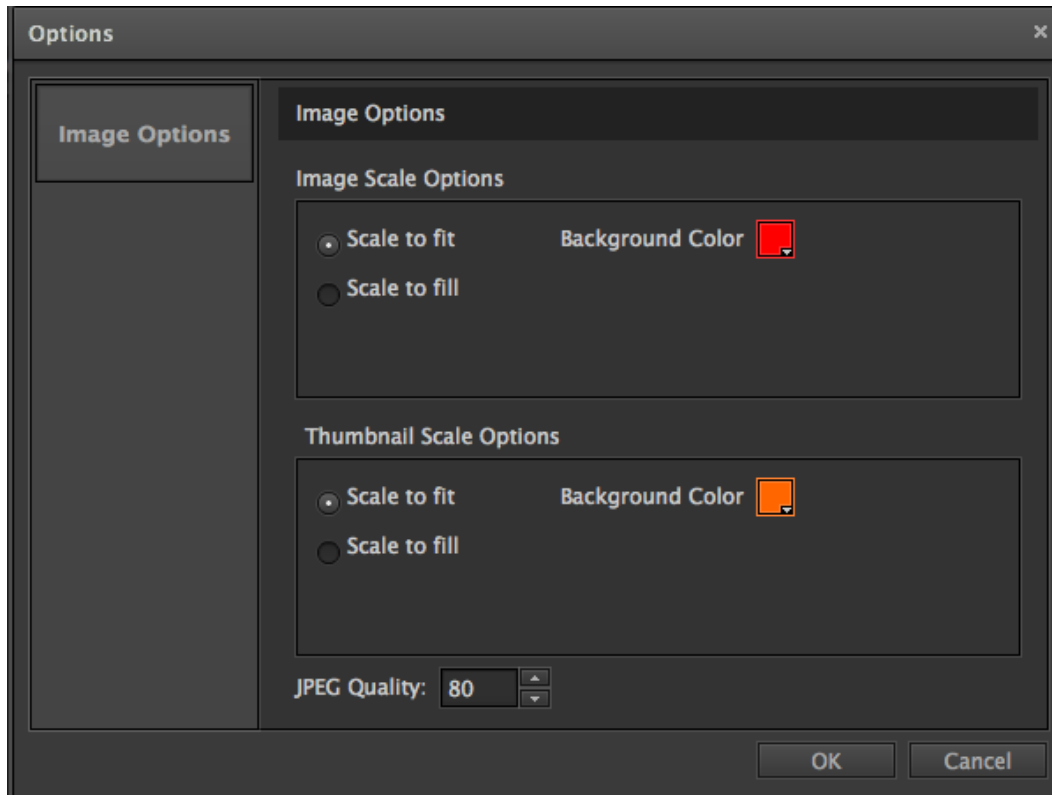

You can customize the theme preset in HTML5 Slideshow Maker during the second step.

## Photo and Thumbnail

You can set the “Image Scale Options”, “Thumbnail Scale Options”, “Image Background Color”, and “Thumbnail Background Color”. The steps are: first, click the “Perference”; second, choose “Options”. A pop-up window will show and then you can take the setting.

## Transition Effect

You can set the transition duration and photo show duration under the Transition Effect tab. If you want to change the default settings for random transition effects, you can click the Define Random Set button to customize it.
